

Please take the time to read this short article:

<https://olis.leg.state.or.us/liz/2019R1/Downloads/CommitteeMeetingDocument/162778>

The biology of the coyote is amazing, and research has demonstrated that **when humans hunt and kill them, they adapt and actually reproduce more!**

Please read that article. **If we hunt coyotes, we are actually doing a disservice to the ranching community!!!** Hard to believe I know, but I have read other articles that say the same thing. **It is actually well-known in the scientific literature that hunting coyotes results in more coyotes and more "problem" coyotes.**

Please consider reversing your opinion on these senseless derbies and actually give the hunting community a black-eye and do nothing to help the ranchers!
