

Good evening (or morning),

My name is Lindsey, mother of two, 18 month old and 3.5 year old. I am a very concerned for their future in this world. There are many stories I can share, many anecdotes that may not mean anything to a person I'm trying to convince. So I won't talk about my experience with vaccines or the families I know that have been negativity and catastrophically hurt by them. My argument is in regards to this bill taking away parental right and a child's right to their own body. The deep root of this bill whether you agree or disagree with it, is forcing a human to medical treatment.

Please ask yourself these questions: What if they keep adding more vaccines on the schedule? Do I know what vaccines are actually on the schedule? Have I seen the ingredients to the vaccines? Do I know how they will react once put together? Why is this being pushed through? Why are there ingredients in vaccines that are banned in most developed countries for being cancer causing? Why can't someone sue a vaccine company? What are the real ramifications of putting one persons DNA into another in a form of a vaccine? Why do people have issue with vaccines? Why is there even a movement? (People aren't up in arms about ibuprofen...) Why aren't the vaccine company creating safer and more effective vaccines? Why can't we have more oversight on vaccine manufacturers? There are so so sooo many questions and so many unknowns it is unwise to allow this bill to pass. We need to do better and progress as a society safely and humanly.

Please understand that person freedom is at risk and ask yourself if you want to be part of a country that force medicates their children.

As I am writing this email my daughter called for me because she had a nightmare. Comforting her I told her that I loved her and wouldn't let anything bad happen to her. Please let that be the case. Do not allow our beautiful state to cross the line and vote no on HB 3063. Please.

Thank you for your time,  
Lindsey Strait
