

Hi!

Our family has severe vaccine injuries but it's impossible to get medical exemptions in Oregon, even though we have medical exemptions in a different state. So if you pass the law to remove non-medical exemptions, our family (and most of our friends) will be selling our homes and moving to a state which believes in medical freedom. Which is very sad because we love it here. But Oregon leaders are taking it way to far. The amount of people who will be forced to move (or homeschool) will have a negative effect on finances for public school system.

Oregon Doctors oppose medical mandates:

A PHD in immunology says unvaccinated children pose zero risk:

<http://healthimpactnews.com/2017/harvard-immunologist-to-legislators-unvaccinated-children-pose-zero-risk-to-anyone>

Oregon has high vaccine rates, so it's a waste of time and money to try to mandate vaccines for the small percentage of children who qualify for medical exemptions, but are unable to get them. All those people will most likely be moving out of state.

In 1986 Reagan passed a law that protects pharmaceutical companies from lawsuits for vaccine injury. Since then, millions of taxpayers dollars have been paid out to vaccine-injured. Please vote to repeal this law, so the vaccine manufactures can pay up, instead of wasting our tax money.

<https://petitions.moveon.org/sign/repeal-immunity-for-drug>

We all know that after mandating vaccines for kids, next they will be forced on adults too (Healthy People 2020), which is a big money maker for the pharmaceutical company, who as I already pointed out, cannot be sued. Also there are over 200 new vaccines being created right now, which will not be safety tested, before injected in all of us...
