

I am very opposed to this bill. It's a violation of our basic rights to decide what to do for our children's health, what to put in their bodies at such a young age.

We don't know the contents of vaccines. We don't always know what their effects might be on small children.

More importantly, we don't have the right to force parents into making choices about their children's vaccinations or medications.

Please, as a parent, allow me the right to decide.

Thank you,

Kelly Hepburn
