

Hello,

I'm emailing in regards to HB 3063. Although I cannot be there today in person, I am sending this email so that my voice may be heard on this issue. I'm a mother of three biracial children who are at proven higher risk of adverse reactions from vaccinations. This bill would require me to give something that has not been proven to be safe to my children. My oldest son was diagnosed with being blind in one eye as a young child. I know he was not born this way. Although too much time has passed for me to prove this was a vaccine injury and due to my own research of his condition, I now believe wholeheartedly that it was. This is something my son struggles with to this day. I am not completely opposed to all vaccinations. However, I do believe there needs to be more independent studies done to ensure they're safe. I also believe vaccinations and all medical concerns should be decided by parents and patients, NOT our government, and profiting drug companies!

Forcing the public to put vaccinations or anything into their bodies and forcing them to put vaccinations or anything into their children's bodies is a violation of our constitutional rights! This bill is forcing people to put poison and other unethical foreign substances into their bodies without any accountability from the manufacturers who make them. As a United States Citizen, I should always have the freedom to choose what goes into my body and make those decisions for my children as well. My state government does not love my children more than I do. There is not enough nonpartisan, independent research done to ensure the safety of these vaccinations and the lawsuits prove that they are dangerous! This is not just a violation of our constitutional and human rights but a violation of our religious freedom as well! I am asking you to please deny this bill and respect the freedoms of your citizens!

Sincerely,
Kerry Rodriguez
