Subject: SB 451

To Whom It Concerns:

I am writing to urge you to kill SB 451, a bill that would let Covanta's incinerator qualify as a renewable energy. Burning other people's plastics, medical waste and trash is neither clean nor renewable. Oregonians prefer to uphold our obligations for a healthy planet for future generations rather than keep baseless, old promises from a former legislator-turned-lobbyist. This is a totally unacceptable plan to work around the very premise of a Clean Energy bill!

As a Salem resident, I am appalled by the horrible air quality here. There is no reasonable justification to make special arrangements for an incinerator that spews particulates and toxins too many to count in our air, and ultimately our soil and water.

Our children and grandchildren depend on your making the right choices now!

Thank you.
