I am in full support of a bill that would require 2 person crews on trains. Not only does it provide an extra layer of protection to me as a railroad engineer. In the event of a medical emergency, or many other things that could happen. But also to the public as well. We encounter many close calls at public railroad crossings. 2 sets of eyes in the cab have saved many lives already, we need that in the future as well. Thank you for your time.
