

Dear House Health Care Committee members,

I am a constituent of Oregon and I support informed choice. I strongly OPPOSE House Bill 3063.

My stance is not about being for or against vaccines; it really is about medical choice and human rights as it will impact many in my community.

Both my husband and I have the MTHFR genetic tag, meaning that our child will likely have the same. If we are unable to receive medical exemptions, we will be forced to home school our child. The current vaccine schedule does not take into account those who have this genetic tag, and the dangerous impact it can have.

*Please retain our right to choose.*

Thank you for your time and consideration about this critical topic.
