

I oppose HB 3063.

As a child I was injured with the MMR vaccine - I developed rheumatoid arthritis which is one of the possible adverse reactions as stated in the vaccine insert. It was my rheumatologist that first educated my family on vaccine reactions - our family doctor had not done so. At that time there was a measles outbreak at my school and so my rheumatologist recommended and provided me with a medical exemption from the MMR booster. Unfortunately, I was already crippled.

I am now a college educated, divorced single parent with full custody - working full time outside the home. My child is extremely healthy. But I would have to quit my job and go on government support in order to protect my child from the risks of vaccine injury. Please do not force medical mandates with economic pressure. That is the antithesis of freedom and personal choice for our bodies.

If I wasn't snowed in, I would be up in Salem right now in protest of this exclusionary, unconstitutional and ill-considered bill.

Thank you,
