

To Whom It May Concern,

This bill is extremely poorly written and is related to hyped up fears about a handful of folks with measles. As an educated mother, I want more hard science involved in these types of decisions that take away our health freedoms. There need to be exemptions in this bill for children whose health might be compromised or have adverse reactions to vaccines, and allowances to vaccinate on a delayed or alternate schedule considering the best interest of our children.

Please vote against this bill, HB 3063.
