

Oppose Bill HB 3063

When it comes to vaccines possibly being mandatory, it sends me into an anxiety attack. My children received vaccines at first. Then my child started having febrile seizures. It was at that time that I decided to stop vaccinating while I did my own research on vaccines and their side effects and ingredients. Since I have stopped vaccinating, my children have not been sick with any illness at all. They are the healthiest they have ever been. Making vaccines mandatory is unconstitutional. They should be kept as a parents choice. Taking that right away from parents is not ok. Not everyone has the option to homeschool. Medical freedom should stay put. We are supposed to be living in the land of the free. Our freedom of choice is being taken away! Vaccines have not been safety tested in 32 years! Drs and nurses are not educated on vaccine ingredients, side effects, safty or effectiveness. Tell me something, wouldn't you want to know what you are injecting into you or your child before you injected it? Wouldn't you want to know what it does to your body and it's immune system not to mention, your brain!?! I OPPOSE this bill. I do NOT want this bill to pass! It is my right as an american, to choose what is best for my children and I and as an American my child should be able to attend school wherever I see fit, regardless of their vaccine status. If vaccines were effective, then nobody in the public who choose to vaccinate, should be worried about an unvaccinated child. I ask and beg you to throw this bill out and protect our medical freedom

and right to choose!
Thank you for your time,
Amanda Dow
