---

Please oppose HB 3063 and oppose any mandatory vaccination bills. Families decline certain vaccines or do alternated schedule for specific health reasons and these reasons should not keep kids from attending school. We are dealing with our own families autoimmune/genetic issues and have close friends & family who have been told by geneticists, endocrinologist to stop vaccines all together or specific ones for them & kids because they do not know how they may interact with these illnesses.

Also the REAL unvaccinated rate in OR is only 2.6% not 7.5% as the media reports. The remaining 4.9% are those that have filed an exemption for only one or two vaccines with known allergies to a specific ingredient. Please oppose this bill as it will negatively affect children who already have medical needs and a 1 size does not fit all... especially when dealing with the vaccine issue. Education should not be a negotiating point for vaccines, especially when parents are trying to make the best choices for their kid's futures.
