Date: Thursday, February 28, 2019 2:39:27 PM

1. No unvaccinated child in a school setting has been responsible for transmitting measles
2. The current source for the Washington "outbreak" is a measles strain from the Ukraine identified as D8
3. The Disneyland measles cases were traced to the B3 strain from the Philippines.
4. If the Oregon legislation is TRULY concerned with public health they would be looking at INTERNATIONAL TRAVELERS entering the US with fevers/illness.
We already have high vaccine coverage in OREGON as evidenced here today.

Where in this bill is the protective measure written that prevents these outbreaks from recurring? It is not, which is why I request that you kill this bill.
