

As a citizen of the fine state of Oregon, I strongly oppose HB3036.
Thank you for considering this email.

My personal reasons for opposition are, including but not limited to:

1. I believe this is an unethical governmental over reach, parents Must have a say in what happens in the lives of their children.
2. It discriminates against low income families who depend on public education for their children.
3. It violates religious freedom for families who have religious reasons to choose not to vaccinate.
4. I personally know people who have vaccine injured children, and I do not believe in the safety of vaccines, as it is often declared that vaccines are unquestionably safe.
5. I find it unethical and highly disturbing that the vaccine manufacturers are not held liable for injuries that may occur when a child receives a vaccine.
6. Children have the right to a quality education and it is simply wrong to deny a child such an education for any reason.
7. School enrollment will suffer when parents take their children out of school, and funding will be effected.
8. It is quite a disturbing thought that the government would force a person to receive a medical procedure against their will.

Thank you so much for your work for our state, and thank you for taking the time to read and listen to the concerns of the citizens who will be effected by this bill.
