

To whom it may concern:

I am writing this letter to express my concern for the upcoming decision on HB 3063. I am a mother of two children who believes in informed consent. I am not anti-vax, I am an informed-vax parent.

My first child received vaccines based on the CDC schedule. Our doctor who I relied on to have our best interest did not ask about my children's family health history before administering a set of vaccines which come to find out should NOT have been administered. It clearly states on the CDC website from the MMR VIS that children who have a parent with an immune system problem should NOT get this vaccine. This was NEVER taken into account when vaccines were given to my child. Both parents (myself and husband, the father) have active immune system problems (autoimmune diseases) and it sickens me to know because I was uninformed my child received it anyways. There NEEDS to be a better system in place for vaccine education, for both physicians and parents.

I believe a system that dictates my children to have mandatory vaccinations is very unconstitutional. A group of governmental officials simply can't tell me anything about my child's health and if a certain vaccine would be indicated. There are many variables that go into vaccinating/not vaccinating and therefore I stand firm on voting NO for HB 3063.

What really needs to be addressed is the toxic poison pharmaceutical companies are allowed to call safe and educating physicians on how to have this discussion with parents. There are pros and cons to everything in this world and something you cannot undo like injecting a vaccine is at the top of my list when it comes to the health of my children.

I thank you for serving in our communities. Thank you for taking the time to read my letter. I ask that you please vote no HB 3063.

Sincerely,  
Brittney Orefice
