

Hello to all,

My name is Breanna Stoutenburgh and I have 3 children in charter school. I think that the vaccination process is set up perfectly as it is right now. Parents have to go through a process to be exempted from vaccines.

My children all are extremely sensitive and have severe excess and gut issues, I would never have felt comfortable giving them all the vaccines that are normally scheduled with the way that they all are so sensitive from food allergy to soaps or fragrances or fabrics.

Our family also has strong religious beliefs about the sacredness of children and some vaccines use aborted fetal cells in the process and actual dna passes to vaccinated child. That violates our faith and constitutional rights to contribute in any way towards abortion when we can not do so and be acting in our beliefs. We feel very strongly against using any such vaccine and so please develop a vaccine that doesn't do this for any vaccine you hold important. There are some vaccines that do not.

Thank you for taking the time to read this,

Breanna stoutenburgh
