

Dear Members of the Joint Committee on Carbon Reduction,

I am writing to voice fervent support for HB 2020, the Clean Energy Jobs bill. My name is Daniel Metcalf, I live in Portland, OR and I am the Director of Business Operation of Townshend's Tea and Brew Dr Kombucha, a Portland based beverage manufacturing company that employs 300 people in Oregon.

As an Oregon born resident and business professional, I want to stress the economic opportunity presented by HB 2020. HB 2020 will create a Cap-and-Invest program that will send the right market signals to drive investment and job growth across the state. By aligning with established carbon markets, OR will continue to be the environmental steward we've known for the last half century.

Thanks in part to smart policies like the Clean Fuels Program, Oregon is already home to more than 55,000 clean energy jobs, according to [E2's 2018 Clean Jobs Oregon report](#). And that economic development is [benefiting the entire state](#), with more than 11,000 rural Oregonians employed in the clean energy economy.

The Clean Energy Jobs bill would send a clear, long-term signal to investors that Oregon's clean energy market is poised for further expansion and give Oregon a competitive advantage to capture the rising tide of investments and businesses ready to put Oregonians to work in clean energy. As experience in other jurisdictions has shown, the benefits of a Cap-and-Invest program extend beyond the cleantech sector and can create revenue streams and provide resources to Oregon's farmers, foresters, and ranchers. It is because of these economic opportunities that [78 Oregon business leaders and investors signed a letter in support of HB 2020](#).

A recent economic analysis commissioned by the Governor's office further demonstrates HB 2020's economic promise – it found that passage of the bill would lead to around 50,000 new jobs in Oregon, a 2.5% growth in Oregon's real GDP, and an increase in Oregonians' household income across all tax brackets, with the most going to low-income households.

And while the economic opportunities are great, the consequences of inaction are devastating. If we fail to mitigate our greenhouse gas emissions, climate change will exact enormous costs to Oregon's people, environment, and economy.

I grew up traveling across our beautiful state, camping in the snow-capped glaciated Cascades, walking along our pristine ocean beaches and admiring variegated flora atop the Columbia River Gorge peaks in spring time. Future generations of Oregonians deserve these same experiences, and to know our elected officials were champions of measures protecting our treasures.

To maximize the benefits to Oregonians, the legislature must pass a strong bill that enables linkage to the Western Climate Initiative which at a minimum means adopting a declining cap on par with California's 2030 requirement that emissions fall at least 40 percent below 1990 levels.

Thank you for the opportunity to provide input. As an Oregonian first, business leader second, I urge you to pass HB 2020 and create the strongest Cap-and-Invest program possible.

Best,
Danny
