

I am a constituent and I am pleading for a no on HB 3063. When I was an infant I received vaccinations and had negative reactions which included fever, behavioral changes, and seizures. In addition my sister and her children were diagnosed with Mthfr a2918c double gene mutation and told specifically by her doctor(then DR. Leslie Stone) that it would hurt her kids if they were to receive vaccines. This gene mutation has been proven by scientists and doctors as a marker to indicate much higher likelihood to have severe negative reactions (including high fever, swelling of the brain and other body parts, seizures, in children a multitude of learning disorders, and death) to the vaccines currently available. My children very likely have inherited this gene as well. Will you bar their education because I can't afford to pay for all the research and tests to prove this for a medical exemption ?! This issue has the potential to destroy my means of livelihood because I won't be able to go work with my kids not able to attend a school. This is not giving me an option. Just realize what you would be doing to families in Oregon in this situation and vote no on HB 3063.
