

My name is Carolyn from Salem, OR and I oppose hb3063. I have three children who are severely allergic to ingredients found in multiple vaccines and per the manufacturer they are contraindicated to take them. We are unable to attain a medical exemption and so this bill would force my children to have medication forced on them that could certainly cause them harm. I am already a homeschool parent, but if in the future my children had need to attend a school or even a function at one, they would have to be turned away because they SHOULD NOT have these medications. Also, there are many schools and day care centers that are housed in churches, while my place of worship does not have these facilities located in our building, there are many families who homeschool, but would be forced to find different places of worship because of this bill. Please do not infringe on the first amendment with this bill or force parents to make a choice that is inappropriate for their children.

Sincerely,
Carolyn W.
