

I'm an Oregon mother of two who witnessed first- hand my sister's vaccine reaction after her 1 year MMR shots... before them she was happy and healthy afterwards she started having seizures and green poop in her diaper along with screaming fits. She later was diagnosed on the Autism spectrum and is currently 27 but has never lived independently ...or held a job for long. I later found out she got a "bad batch" as did thousands between 1991-1993. Something that carries such great risks can't be mandated ...or several thousand families will be forced to take their children to a state that protects medical freedom of choice! Please vote "No" HB 3630!!
