

Hi My name is Vlad,

Consider this

I have bad history of immunization.

I had allergies to Immunizations. I used to pass out for them.

My sister died for it.

My nephew had bad reactions from them, acting crazy each time.

I strongly believe it not for everyone. Even you believe it is for good for you, you still should consider right dosage based on your wait and individual immune needs, which is not happening right now.

I had talk to doctors about immunizations if vaccination really protecting from illnesses so

Doctors do not guarantee any, so how can you enforce where is zero guarantee.

We live in Democratic country which guaranties freedom of choices including religious freedom.

Compare to some other aggressive style of government countries like North Korea, China and others.

Do not forget we have rights in United States

- **free speech**
- **free press**
- **freedom of religion**
- **freedom of assembly**

Try to inspire us by proving that it is really works and safe for our kids, rather in first us.

But now we can see that its it's not working, by having alot of side effects, and making our kids more sick

.
