

I oppose HB3063...

I personally believe heartily in some vaccinations....as a child I was vaccinated for Polio and Smallpox and I vaccinated my children in the 1970'sWhat I don't believe in is government control over my choice of medical care for me and my family. In this case I think this bill is reactionary due to the recent outbreak of measles in the northwest...I have a few questions about this...What strain of measles has caused this seemingly sudden interest? Is it the deadly one, or the rash and fever for 3 days one? Is this the result of a media blitz causing a frenzy? If so what entity is behind the frenzy, big pharma? If 97.4% of the kids are vaccinated then they won't be getting sick anyway, right (assuming the antiquated formulas for vaccinations being injected are even the same strain as today's)? I think I have more questions...I have one strong statement...The United States of America is not a dictatorship, it is a democracy. I am afraid this bill will open doors we would like to keep shut. I have been a registered voter for 48 years. I believe in this America..or at least what it was.

I am Garnet Banks, a mother, a grandmother and caretaker of children.
