Examples of products covered by HB 2772

3/4/19

HB 2772 addresses products that are offered for retail sale for household use in Oregon that are hazardous, i.e. they have physical characteristics that define materials as flammable, corrosive, toxic, or reactive under specified federal regulations. In general manufacturers of products are very aware of the products they make that fall under these regulations. It is difficult to list categories of products, because many different formulas may be used by different manufacturers, some of which would be covered, while others would not be. While not an all-inclusive list, here are some examples of covered products:

- Many solvents, thinners, strippers, and a variety of other solvent-based home improvement products (note that paint, including oil-based house paint, is excluded, as it is covered under the PaintCare program)
- Spray paints and most aerosols
- Fuels such as lantern fuel, white gas, and propane cylinders
- Some household cleaners, if they are strongly acidic or alkaline, such as many drain cleaners, oven cleaners, rust removers, toilet cleaners, concrete cleaners, ammonia, liquid bleach
- Some automotive products, including some varieties of windshield washer fluid, some fuel additives, auto paint and body repair products, some specialty cleaners & adhesives
- Pool and spa care products such as strong chlorine products and pH adjusters
- Some arts and crafts products, such as glass etchants, rubber cement & some other adhesives, some craft paints
- A few health and beauty products including some nail polishes and removers, most hairsprays, and other products that contain sufficient alcohol to be considered flammable
- Nearly all lawn, garden and home pest control products, such as bug sprays and baits, flea and tick control products, weed control products, etc.
