

Please oppose this bill.

Our youngest daughter had a well documented adverse reaction to her first dTap vaccination in September, 2011 that resulted in years worth of periodic fevers reaching a maximum of 108.4 degrees Fahrenheit for every 3-5 weeks of her life up until she was placed on a homeopathic vaccine detox protocol. Within the protocol, we spent thousands of dollars in network and out of network for allergy testing only to find out that she had high levels of heavy metal toxicity and allergies to nearly all the adjuvants within the vaccine. We aren't anti vaccine, we are immune boosting parents. This injury has had serious consequences for our family.

Please oppose this bill and protect our rights as parents to create wellness within the sickest generation on record in the United States.
