**Subject:** Testimony for HB 3063  
**Date:** Friday, March 1, 2019 2:34:05 PM

---

Dear Health Care Committee members,

My name is Nicole Marchant, and I am testifying in opposition to HB 3063. I am a licensed professional counselor who specializes in children, a mom, and a previous believer in the safety and efficacy of vaccines.

I am lucky...my daughter only developed a nasty case of eczema after a series of “catch-up” shots at the beginning of her preschool year. Some of my clients were not so lucky, and have had to contend with more acute or chronic vaccine adverse reactions.

Vaccines are not without risk...(of injury or death, for that matter)...Just take a look at any vaccine package insert). While adverse reactions are multifactorial, and occur when the genetic propensity and environmental trigger stars align, we can say that vaccines can and do cause harm, and are not right for EVERY child (as would be mandated). We cannot risk the health of one child for the supposed health of another.

This is an issue of medical informed consent, and public health!

How many vaccine injuries and reports to VAERS will it take to see that the real public health crisis is not the spread of a common childhood illness, but in the effects of the mandate?

Please, you are the people who have voted for women’s right to choose, and terminally-ill patients’ right to choose (Death with Dignity)... so please support a parent’s right to choose.

Please help us teach our children about freedom, and consent, and support us in opposing HB 3063.

Resources/studies to examine...
