---

Hi,

I'm writing concerning HB 3063. I strongly oppose this bill. It is an absolute government over reach and I will vote against any representative who votes in favor of it. We as Americans are losing freedoms daily to this bloated government and I don't see how someone can argue that we are free people when the government is forcing citizens to inject their innocent children with vaccines. Many of these vaccines are packed full of aborted fetus, chemicals etc. There is no honest person can say that they are safe or risk free. Many of the side affects are much worse than the diseases they are supposed to protect against. Citizens who choose not to subject their children to these vaccines should not be shunned from society as if the unvaccinated kids are foaming at the mouth. What's next internment camps for the unvaccinated? Not to mention if the vaccines work so well then the vaccinated children should not worry if an unvaccinated child gets sick. This means the only people that theoretically need to worry about the unvaccinated crowd are the very people that choose not to vaccinate. Clearly these parents have made the educated decision that it is worth the risk. The recent measles "outbreak" is being used as a scare tactic to try and force more people into vaccinating out of fear instead of making educated decisions. All over measles... similiar to chicken pox. Hardly serious enough to subject a child to autism, cancer etc over. Every person responsible for the drafting of this bill should be ashamed. Please repent of your terrible judgment and kill this bill before killing more of our liberties.

Respectfully

Ryan Goering
