

I oppose HB 3063.

I do not have children so it is not a personal issue for me. But I think parents should have the right to decide if they want their child to be vaccinated or not.

I was vaccinated as a child (I'm 61 years old). Today, vaccines are much more aggressive and administered much more frequently and are much stronger.

Why would a parent allow mercury to be injected into their child's body?

I suggest that there be a inquiry into the ingredients of all vaccines and a detailed report on how they affect children in the short and long term.

I ask that you oppose HB 3063.
