

Hello committee,

I am writing in opposition to HB 3063. This bill would take away my freedom to make medical choices for my children for them to attend public school.

I vaccinated my first 4 children simply because I believed that vaccines work and my doctor told me to. But having a new baby almost 2 years ago I found myself wanting more information after reading about the death of 19 month old Nicholas Catone from vaccines.

As I delved deeper into the safety studies (there are no double blind studies done) and saw the ingredients I was blown away. Aborted baby cells are in many of the vaccines I had allowed injected into my children. I am very against abortion per my religion that says "thou shalt not kill". I can not move forward and vaccinate even if they were proved safe due to my religion.

I also have been blown away that the manufacturers can not be held liable for deaths or injury from vaccination. I have seen many parents come forward with vaccine injuries and not be believed by their doctor or medical professionals. The deaths are mostly swept under the rug and called SIDS. No one looks at the causal relationship to vaccines. This is extremely disturbing to me. Everyone wants to call them safe and effective. Then let those people prove it. They do not have the science they claim.

The media is extremely vague and skewed toward big pharma. We are not stupid. The truth is being hidden from the public and I pray that others will wake up as I did to this barbaric and greedy system that is maiming and killing our beautiful children.

Even with everything I've said, the most important thing is that what is proposed is stripping me of my rights to choose between a public education for my children or injecting them with a substance that has not been proven safe and goes against my religious beliefs. Please stop this unconstitutional bill.

Thank you,  
Stacy Janesofsky
