

I am writing to show my support for hb-2935, Relating to prescription drugs; declaring an emergency.

As a completely blind individual I am directly impacted by the fact that I cannot access information printed on my prescription bottles.

If I were to take the wrong prescription or dosage, this could very well kill me.

Technology today allows this to be open to all pharmacies at a reasonable investment on their part to save lives.

There's no reason that all individuals shouldn't have access to the information for the medication they're putting in their bodies.
