

To whom it may concern,

I am writing to you to voice my opposition to House Bill 3063. As a vaccine injured individual and a mother, I am deeply concerned about mandating a product that has not undergone adequate safety testing and at minimum causes thousands of injuries every year. It is draconian to remove the choice for a product that comes with risk of permanent injury or death. Over 30,000 vaccine injuries are reported to VAERS every year and less than 1% of injuries are reported by the CDC's own admission. That means the number is more likely over 3 million injuries out of 287 million vaccines administered every year. That risk is much higher than the 1 in 10,000 that died from measles before the introduction of the vaccine. Measles is not a high risk disease in countries with adequate nutrition and a few hundred cases is not an epidemic. However, the 54% of children who now have a chronic disease is an epidemic. Please consider putting your efforts towards actual health crises instead of infringing on the right to medical freedom.

Sincerely,

Elisa Haworth
