

- Good Afternoon
- My name is Christine Doran and I'm from Hillsboro OR, Washington County.
- Recently my husband and I have been researching vaccines and I am appalled at what we found and what we didn't find.
- What we didn't find were studies done on vaccinated vs unvaccinated children.
- Why not?
- Where are all the studies done for long term side effects of vaccines?
- Where are the double-blind placebo tests?
- There was a study done by Dr. Antonietta M. Gatti and Stefano Montanair published Jan, 23, 2017 about New Quality Control investigations on vaccine micro & nanocontaminants.
- 44 different vaccines from different manufacturers such as Glaxo Kline Smith, Novartis & Pfizer to name a few, were analyzed.
- The test concluded that out of 44 vaccines 43 of them were contaminated with anything from: Red blood cells, unbeknownst whether they were ~~human~~ human or animal, organic materials, lead, tungsten, iron, stainless steel, the list goes on & on.
