

My name is Jessica Gibson and I oppose HB 3063.

This bill is demanding that we give up our rights to our own bodies.

Hear me when I say, **THIS BILL IS DEMANDING THAT WE GIVE UP OUR RIGHTS TO OUR OWN BODIES.** This bill, if passed, will allow the pharmaceutical companies who make these vaccines and the CDC who implement them into our mandated vaccine schedule to make decisions on their behalf, not ours. A behalf that has no repercussions after President Ronald Regan implemented The National Childhood Vaccine Injury Act of 1986, which granted no liability to the pharmaceutical companies, the CDC, FDA, HHS, NIH or any scientist, doctor or nurse who make or administer these vaccines.

Robert F. Kennedy Jr. sued our government in 2018 and won because there has not been a safety study conducted in over 30 years.

The pharmaceutical companies who make our vaccines are some of the top lobbyists in Washington DC. These are billion dollar corporations, and our government receives money from these corporations. The CDC who is a government agency owns patents on over 20 vaccines. This is a conflict of interest.

Will you tell me how they have our safety and the safety of our children at heart when little to no safety studies have been done?

\$4 billion in compensation has been paid to a small group who have been granted a settlement from The National Childhood Vaccine Injury Court, but what about those who were not allowed into the vaccine court, what about those who's injuries didn't qualify? How badly does the injury have to be to find solace? It is us the taxpayers who pay for these injuries, not our government and not the pharmaceutical companies who make these vaccines.

What is in your heart. You sit in front of all of us today, holding such a precious power within your grasp. You have the power to take away our freedom to our bodies. You have the power to give us our freedom that is inherently ours. Which one will you choose?

Thank you for your time. Please vote NO on HB 3063.
