

I support HB 2020 because it makes good economic sense. It is a good step forward in addressing our much larger climate crisis that faces us all. If we don't choose this in a few years there will be no viable environment for humans. Insects will survive but Oregonians won't. Our grandchildren's generation will have no future despite the sacrifices they will face. Please use common sense and a clear mind that thinks ahead. Cleanr energy is needed.
