In Support of HB 3063

Right now, Oregon and Southwest Washington are seeing first-hand the effects of the current measles outbreak on individuals, families, our caregivers and our community. This outbreak was preventable. Those who opt out of vaccinating their children could place other vulnerable members of the population, including infants and those with compromised immune systems, at greater risk for exposure. **Vaccine exemption rates are skyrocketing in Oregon.** Right now, 7.5% of children in kindergarten are unvaccinated, putting us below the community immunity threshold and endangering vulnerable populations. **This isn't about removing choice, this is about protecting those who have NO choice.** Individuals with compromised immune systems, infants, cancer survivors, transplant recipients and many others have no protection against certain diseases. As a conscientious society, it is our responsibility to protect those who cannot protect themselves by getting vaccinated. We see this issue too often in our offices where families with erroneous information are making decisions that harm others in our community.

Despite what you may have heard, vaccines do not cause autism in children. Scientists at the CDC, the Institute of Medicine and other reputable entities have never found a credible link between the use of vaccines and autism in children. **Vaccines save lives and we are facing a public health emergency today.** Oregon is seeing the impact of high vaccine exemption rates in the Portland area as over 61 individuals have contracted Measles, an extremely contagious disease with devastating effects.

Please support HB 3063. Write your legislators and let them know that the majority of voters agree with stopping the philosophical exemption that puts people at risk in our community!

Thank you,
