

To Whom It May Concern ~

I'm writing to state my support for the Clean Energy Jobs Bill. I don't want Big Oil telling us in Oregon what to do. This is our state, and we have a whole lot to lose if we (and others) don't take immediate action on climate change. Pretending that carbon and man-made emissions have nothing to do with climate change is downright silly.

Let's turn things around, and generate jobs while we're at it.

I believe legislators should also prioritize educational and other efforts to *reduce unnecessary energy use*, and wasteful use of water. Industries that make pollution (including plastic packaging) should be involved in improving that packaging. Any ways that government can help people re-use, help businesses recycle? I'd like to see that.
