

Hi this is my written testimony opposing house bill 3063. As a mother of a special needs kid I feel very strongly about being able to choose when to vaccinate my kid. I have done lots of research on how vaccines work and when they are effective and want to be able to use that information to choose the timing for my son. There are lots of additives and toxins in vaccines that very sensitive kids such as my son have the potential to react to if they are not in an optimal state to receive it. Please consider this and vote NO. Thank you from my heart.
