

Hello,

As a mother of two young girls who will face serious consequences of global warming, I am writing to say that we *must* pass a strong and rapidly declining carbon cap that covers all greenhouse gas emitting entities.

The fossil fuel industry has engaged in fear-mongering. But the future is far more frightening if we do not do the right thing.

I pay to deal with my waste products in Portland, OR. Why should carbon pollution be any different?

Clean Energy Jobs: they're good for our climate and good for the economy.

For our children,
Emily Chenoweth
