Subject: No to HB 2020 "cap and invest"
Date: Friday, March 8, 2019 11:11:00 AM

"CO2 will be good for the Earth," Happer told The New American magazine at a 2016 climate conference in Phoenix, Arizona, that brought together leading scientists and experts in various fields to expose the lies and alarmism. "If you look at geological history, CO2 levels are unusually low right now, it's very seldom that they've been this low. Many plants are not growing as good as they could if they had more CO2, so CO2 by itself will be very good for the Earth, more will be a good thing." He also said it was "pretty clear that we're not going to see dangerous climate change" as a result of human CO2 emissions."

No to HB 2020 Cap and Invest bill. It is not needed. It is a waste of money just like the bullet train in California. CO2 is not a pollutant. Don't fall for the demonization of CO2. Get educated instead of indoctrinated.
