

As a legal resident of the State of Oregon and citizen of the United States I am opposed to HB 3063. I find it alarming that as a parent that I would be forced to have my children partake in a medical procedure in order to be granted admission into a public school system. I am grateful for the many medical opportunities available to me and my children and with each visit to the doctor I have always been allowed to make a decision as to my health without consideration of admission to a public institution. I understand the value of some vaccines both as an individual and as a society, but that should be my choice NOT the State. The vaccine exemption waiver protects my rights and allows for continued freedom.
