RE: HB3063

I would to make you aware of conflicts of interest regarding the CDC, CDC Foundation, and WHO. These organizations accept monies from pharmaceutical companies, foundations, and organizations that have a financial interest in the CDC recommending their products.

It is unethical for the CDC and WHO to accept donations or be partners with the vaccine industry.
I have included some links and attachments that show the vaccine industry's influence with the CDC, CDC Foundation and WHO. Thank you for taking into consideration the conflict of interest. It is wrong for the health of countries to be dictated by the need for greed. The health interest of human beings are not foremost to these organizations, keeping their donors/sponsors happy and lining their pockets is their ultimate goal. Vaccines are unproven as to safety, duration and efficacy, as shown by the recent pertussis outbreaks of vaccinated people and numerous studies in the National Institute of Health. Vaccines are experimental and using vaccination for education to blackmail people into using a product is just plain wrong. These corporations and government agencies are using an entire planet as a science experiment. Taking away a person's right to consent and backing them into a corner using children as a tool is EVIL just so they can line their pockets and play ego. WHO and the CDC and CDC foundation should not be allowed to accept any monies/gifts from the vaccine industry or people directly involved with the vaccine industry. There are human lives at stake and these people are playing roulette with them for profits. Please on behalf of the people of Oregon and every other state experiencing bills like HB3063 vote NO to HB3063 and work on stopping the collusion between the CDC, CDC Foundation, WHO and many of their contributors. A contributor should not be given the right to influence our government agencies. I believe these pharmaceutical companies, GAVI and the Bill and Melinda Gates Foundation are doing. Thank you for doing what you can that is moral and getting whatever other entities involved that can help put an end to this unethical and immoral practice.

CDC/CDC foundation conflicts of interest
