Subject: HB 2656

I am writing to encourage your support of HB2656. The State of Oregon needs to protect communities all over the state whose drinking waters are jeopardized by pesticides, rodenticides, herbicides, fertilizers, silty water and algal blooms requiring mandatory upgrades to their water systems.

Please support these improvements to the practices of industrial clearcutting and the *heavy* applications of chemicals and fertilizers in the watersheds which supply our drinking water.

I urge you to look support this bill.
