

"I don't favor giving up on liberty for a **false sense of security**" Rand Paul says. I believe this also. From interacting with pro-vaccination people since bills in states have emerged to take away freedoms, it amazes me how uneducated they are. Most believe that since they are vaccinated, they will never get the disease. They have never been given the information that vaccines are not 100% effective, since vaccine information is limited and strategically leave out a lot of the information to make informed choice. Most of them don't know that if they were born after 1957, they need a booster for MMR and even then it is not 100% effective. Unless they get titers checked, they don't know if the vaccine even worked for them. It is called primary and secondary vaccine failure. They act as though they are immune and if they do get the disease, they won't know it and think it is something else and not get medical treatment if needed until it is too late.

One mom told me her daughter had been vaccinated for pertussis. When her daughter came down with pertussis, she blamed an unvaccinated child in her class. The unvaccinated child was not sick. The mom, because her daughter was vaccinated, did not even think it could be pertussis until several weeks later. Her daughter survived but the mom had to do Heimlich maneuvers on her every time she had a coughing fit. Being vaccinated and using vaccines that are not 100% and have unknown duration and waning time, puts vaccinated people at risk. A child who is unvaccinated has a better chance of getting the disease and getting timely treatment because the parent would know that the disease is a possibility. The unvaccinated child would also have a better chance of fighting the disease because they have an intact immune system. Unfortunately, the vaccine schedule they have for children currently attacks the child starting on the day of birth by the HepB requirement for newborns. All newborns whether at risk or not are required to get this vaccine. With the vaccines they are recommending for children, vaccinated children do not stand a chance for a healthy life.

Why is it ok for teachers and physicians to be able to claim all exemptions, but not parents to protect their child/?

AMA Principles of Medical Ethics: I,II I,III,IV,VII

8.7 Routine Universal Immunization of Physicians As professionals committed to promoting the welfare of individual patients and the health of the public and to safeguarding their own and their colleagues' well-being, physicians have an ethical responsibility to take appropriate measures to prevent the spread of infectious disease in health care settings. **Conscientious participation in routine infection control practices, such as hand washing and respiratory precautions, is a basic expectation of the profession. In some situations, however, routine infection control is not sufficient to protect the interests of patients, the public, and fellow health care workers. In the context of a highly transmissible disease that poses significant medical risk for vulnerable patients or colleagues or threatens the availability of the health care workforce, particularly a disease that has potential to become epidemic or pandemic, and for which there is an available, safe, and effective vaccine, physicians should: (a) Accept immunization absent a recognized medical, religious, or philosophic reason to not be immunized. (b) Accept a decision of the medical staff leadership or health care institution, or other appropriate authority to adjust practice activities if not immunized (e.g., wear masks or refrain from direct patient care). It may be appropriate in some circumstances to inform patients about immunization status.**

Teachers and physicians are human beings also and can just as likely become infected. But those teachers and physicians that are unvaccinated will be more apt to stay home and know because of unvaccinated status than other adults that have false sense of securities and believe their illness is something else that is not contagious.

With the numerous hours I have spent researching the "vaccine industry" I have come across disturbing information as to the agenda of Bill and Melinda Gates Foundation, WHO, GAVI (also Bill and Melinda

Gates) and the pharmaceutical vaccine manufacturers being donors to the CDC, CDC Foundation and WHO. When this is done, I will be filing a complaint with the federal agencies (DOJ, etc) to investigate this blatant conflict of interest. Please if you believe in morality and not allowing a man to play God for his ego, vote NO on HB3063. The Gates have been kicked out of India, in Kenya there was a problem between the Catholic church and the vaccines causing sterility, (the Catholic church labs showed the vaccines contained a sterility drug, the state labs did not. No resolution.

Please, please for the children of Oregon vote NO on this bill. Idaho chose medical freedom in case you are unaware. MMR is not the only vaccine that has primary and secondary failure, how can something be forced and used as a tool for education that is not even known and experimental.. Thank you for voting NO on HB3063 !

[Primary vaccine failure to routine vaccines: Why and what to do? - PubMed Central \(PMC\)](#)

Background. Vaccination recommendations and programs are based on clinical trials performed in selected, healthy and mostly young populations. The data derived from these vaccine trials on safety, immunogenicity and efficacy are thus performed under "ideal situations" aiming to reflect the normal population distribution but certainly exclude risk populations.

[Measles Outbreak Associated with Vaccine Failure in Adults — Federated States of Micronesia, February–August 2014 - Centers for Disease Control and Prevention](#)

Summary. What is already known on this topic? Measles outbreaks occur when the virus is introduced into a population with inadequate immunity, and are almost always caused by failure to vaccinate a high proportion of susceptible persons.
