

## Testimony in Opposition to HB 2233

Catie Theisen

Oregon Nurses Association

March 13, 2019

Chair Lively and members of the committee,

Thank you for the opportunity to submit testimony in support of promoting public health by ensuring that public spaces are free from smoke and vapor pollution. The Oregon Nurses Association is proud to represent over 15,000 Oregon nurses who are acutely aware of the detrimental effects of smoking and second-hand smoke and vapor, which is why ONA supports protecting and expanding the Indoor Clean Air Act (ICAA) and prohibiting smoking in all public spaces.

ONA opposes the bill as written because inhaling smoke of any kind is harmful. Marijuana smoke is still a combustible substance that contains many of the same toxins, irritants and carcinogens as tobacco smoke.<sup>1 2</sup> That is why the Journal of the American Heart Association encourages secondhand smoke laws extend to marijuana use because both tobacco and marijuana smoke impair blood vessel function similarly.<sup>3</sup>

In the same vein, allowing smoking and vaping at cannabis cafes puts an undue burden on the employees who work there. Under the Indoor Clean Air Act, employees are guaranteed workplaces free from second-hand pollutants. Separating smokers from nonsmokers, opening windows, or relying on ventilation systems does not prevent people from breathing secondhand smoke. This is why the American Society for Heating, Refrigeration, and Air Conditioning Engineering (ASHRAE) added marijuana smoke to their definition of environmental tobacco smoke (ETS) and state that there is no ventilation system that can eliminate it.<sup>4</sup>

We appreciate the sentiment of the -3 amendments in addressing the significant violations to the Indoor Clean Air Act. However, ONA still has concerns about smoking in outdoor public spaces. A John Hopkins study showed that after an hour exposed to second hand marijuana smoke, nonsmokers' blood and urine tests showed detectable amounts of THC, in some cases enough to test positive for workplace or commercial drug testing programs.<sup>5</sup> Particularly for marijuana festival events, the amendment still puts an undue burden and risk on the general public and sharply increases the likelihood of second-hand exposure.

As a state, we have learned a tremendous amount about the negative health impacts of tobacco, nicotine and second-hand smoke over the decades and worked hard to put in place regulations that minimize exposure for future generations. The state should use that knowledge by ensuring that the starting point for marijuana regulations aligns with current tobacco regulations – namely through limiting use in public spaces.

As direct care providers for many Oregonians who suffer from chronic illness as a result of smoking and second-hand smoke, ONA urges you to oppose HB 2233 as written and to carefully consider the effects of public smoking on Oregonians. We ask that you put the rights of employees and members of the public to be *free* from second-hand smoke and vapor over the privilege of marijuana users to smoke and vape inside businesses and public spaces.
