

Hello,

I was just reading the amendment proposal from Cheri Helt and found it deeply disturbing. I wanted to make the committee aware of the recent science that was published about the DTaP vaccine. I have sent it before but wanted to make absolutely sure that it was seen before the vote. It is officially a vaccine failure, and should not be on a mandated schedule. This is straight from the top experts who are highly respected, the first paper was published on February 26th, 2019. This explains what we are see happening with the current whooping cough outbreak, only those who are vaccinated are sick.

Maybe we can get an amendment for a Scientific Exemption?

DTaP makes you more susceptible to pertussis.

"Because of linked-epitope suppression, all children who were primed by DTaP vaccines will be more susceptible to pertussis throughout their lifetimes, and there is no easy way to decrease this increased lifetime susceptibility."

<https://academic.oup.com/jpids/advance-article-abstract/doi/10.1093/jpids/piz005/5359449?redirectedFrom=fulltext>

It fails to give you immunity, and instead makes you a silent carrier which is much more dangerous. You won't know that you're sick, so you won't know to stay home and away from others.

"Local mucosal immunity is not induced by the current vaccination regimens, which is likely the main reason why pertussis vaccination fails to control B. pertussis infection and only induces at best modest herd immunity."

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6339907/>

FHA antigen causes immunosuppression (opposite of a vaccine).

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2193600/>

Boosters don't work, either (esp. when originally vaccinated with DTaP.)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6118631/>

Pertussis vaccination is creating mutant strains.

"I think pretty much everyone agrees pertussis strain variation is shaped by vaccination."

<https://www.quantamagazine.org/how-vaccines-can-drive-pathogens-to-evolve-20180510/>

I would also like to suggest that no vaccines currently tied up in lawsuits be mandated until they are legally cleared of wrongdoing. Merck has been in court over the mumps portion of the MMR vaccine for years. There was also a CDC whistleblower for MMR who still hasn't been addressed. There are serious concerns, and I'd like to ask who will be held liable if this bill passes and children get hurt? OHA, perhaps?

Thank you for your time,
Jena Blair
