

I urge you to reject HB3063. The Measles outbreak is NOT a public health emergency. It is a common childhood illness that has not resulted in death during this outbreak. The government should not mandate that individuals to be forced by corporations to inject toxins and unknown substances into their bodies. **This bill should be brought to a public vote and not decided behind closed doors on a topic that is this contested. Citizens do not elect representatives to force medical decisions on them.**

Children should not be prohibited from attending school/college for which we pay for in our taxes! Corporation who profit greatly and have **NO liability for harm!** Tax payers even have to compensate vaccine injured children, their own children, if they are the unlucky ones.

We know the links of aluminum to Alzheimer's and heart disease. It is common knowledge not to cook in aluminum because of the potential harm **BUT we are injecting our kids with massive amounts of aluminum at rates that have not been tested on how that effects health later in life. It seems pretty obvious to me that is dangerous. This committee needs to fully investigate at the adverse risks before voting not just be swayed by fearful reporting on the radio and**

TV. <https://childhealthsafety.wordpress.com/graphs/> <https://www.nvic.org/Vaccine-Memorial.aspx>

My child did have a vaccine reaction. She may not be able to get a very difficult to obtain medical exemption BUT this bill would force my child to receive vaccines that could permanently injure her. We will already have to make difficult decisions because of college admittance, study at hospitals and career days for my 4.0 student (who has missed no more than 5 days of school because of illness since preschool). Not only are they planning to inject every child, but there are also plans for an adult vaccination schedule coming

soon <https://www.hhs.gov/sites/default/files/nvpo/national-adult-immunization-plan/naip.pdf>.

I certainly have no intention of allowing anyone to force me to inject aluminum, mercury, barium, polysorbate 80, aborted baby cells, dog, monkey dna, eggs, msg... I am doing everything I can to avoid toxins in my cleaning products, personal care products like shampoo, makeup, organic foods etc. I already have heavy metal toxicity, confirmed by a test from my doctor and because of gene mutations like MTHFR cannot detox heavy metals. How does this committee plan to deal

with my refusal? Because I want to take care of my family, will I be fined, arrested or have to move? I will not consent.

This is unethical as the vaccines do not even need to be effective or have double blind placebo trials before they are released into the public. There is NO incentive to make them safe because of the Childhood Vaccine Injury Act. They are not liable and there is no public jury. Americans already have one of the most aggressive vaccination schedules and one of the highest infant mortality rates.

Why are politicians making medical discussions? These are decisions to be made with healthcare professionals. Why is vaccine information being removed from social platforms? Has this committee studied pubmed and studies that indicate adverse reactions and ineffectiveness in certain groups for certain vaccines? **IS anyone on this committee getting money from special interests or is this purely altruistic?**

Corporations are gaining too much power at the government level. Our elected officials should be protecting the PUBLIC interests and allowing us to make choices that are best for our health.

Thank you for your time and consideration!

Please vote NO on HB3063!

Very concerned mom and American citizen,
Kristina Perry
