

House Health Care Committee Members,

Here are my amendments for HB 3063

1. The emergency clause to be removed from 3063.
2. Remove OHA from the medical exemption process. This decision should be between a patient and their provider without any government restriction or involvement, just like medical reasons for abortion.
3. The CDC catch up schedule needs to be accepted, and positive titer tests as an acceptable alternative to all of the doses.
4. This bill needs to be limited to ONLY the vaccines that are currently required for school attendance. If OHA adds vaccinations to the required schedule after the date that 3063 was introduced, exemptions for any reason need to be available for those newly required vaccines.
5. Exempt children with IEPs from 3063
6. Exclude private and online schools from 3063
7. Keep religious exemptions
8. Children who have already started school, even Kindergarten should be grandfathered in through high school. I saw a comment that if someone didn't want to vaccinate or home school their kids they shouldn't have had kids. I never planned to not fully vaccinate my kids, but even if I had, I'm not the one who changed the rules. Exemptions have been allowed ever since vaccines became required for school attendance in the 60s. If we had known the rules would change decades into the game, we would have made different decisions.
9. Cash vouchers for families who are home schooling, the equivalent of what charter schools for each district receive per student per year.

Thank you for your consideration,

Amy Dorr
