

B 3063 is based on MANY false narratives:

There is no epidemic to put emergency status propaganda on legislation. In April 2018, OHA provided information to Governor Kate Brown showing "high vaccination rates for all school required vaccines".

Per OHA, there has never been a decline in MMR vaccination rates in Oregon. 95.6% is the CURRENT MMR vaccination rate for k-12.

Anyone who reads a MMR manufacturers insert will see MANY adverse side effects and the statement "carcinogenic potential, mutagenic potential or impairment of fertility have NOT been evaluated".

This bill does not address:

- How children who have already been vaccine damaged can not attain a medical exemption for other vaccines with similar ingredients and side effects.
- Special needs children will lose educational services and private therapy if the facility is classified as a "child care facility" by the state.
- Many residents will not be able to attend CHURCH under the parameters of this bill.

- Many parents will have a dramatic loss of income if one parent coerced into leaving the work force to home school full time.
- The impact on single-parent households, leaving many families with no option but to leave the state.
- The small business owners who relocate business to a different state.
- The SUBSTANTIAL RISK that comes with a one size fits all approach to "preventative" public health especially in regards to liability free pharmaceutical drugs that have not been studied for their synergistic effects.
- The Hippocratic Oath and Nuremburg Code can not be ignored!

The very concerned Turner Family of three.
