

Dear Representatives:

In this vaccine debate we must be honest:

The Center for Disease Control's own website states that the #1 one reason for measles cases in the United States today is due to foreign travel--not medical or religious exemptions.

And even if there were NO exemptions the average of 208 measles cases a year would still happen....since the vaccine ITSELF is only 92% to 95% effective: Even vaccinated people can get the illness.

Don't turn faulty reasoning about measles cases into mandatory vaccines or no education!

Vote no on HB 3063!

David Sawyer, Salem, Oregon
