Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 11:25:41 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Alan MacComb

Dear The Joint Committee on Carbon Reduction,

We need as strong a bill as possible. Please do not let the fossil fuel industry influence your decisions. The bill needs amendments to make it stronger, not weaker. We need to reach zero emissions by 2020, not wait until 2050!!!! My grandchildren's future is in jeopardy (as are the futures of all). Please stay strong and prevent even further catastrophic climate destruction.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Amy Carlson

Dear The Joint Committee on Carbon Reduction,

This bill is too weak as currently written. Why aren't we trying to protect our children's future? I ask you to pass a strong bill that recognizes the existential danger that we face.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

I see direct industrial effects on climate nearly everyday living in Westfir with logging trucks and oil trains passing by daily. The subsequent fires and drought led us to one of the worst winter storm emergencies our community has seen in a decade just a week ago. Climate change is real and we must do all we can to save the one and only livable planet we now occupy. This bill is a first step. Please help to pass this bill! Future generations deserve to be considered in your decision. Thank you.

Dear The Joint Committee on Carbon Reduction,

I urge you to pass the strongest possible version of House Bill 2020. I've been sending comments on this bill for years and it is past time for Oregon to take action towards solving humanity's greatest threat. The bill will reduce harmful pollution while also strengthening our communities and our economy. Climate change is here now and we're already suffering from wildfires to water shortages. These last few years should be a wake-up call. A strong bill should: -Include targets to reduce GHG emissions 20% by 2025, 55% by 2035 and 100% by 2050 as scientists say we must. -Utilities and other industries should not be given freely assigned allowances or exemptions. No exemption for the proposed Jordan Cove LNG terminal can be allowed. -Offsets should not be allowed as they are just moving the baton. -Low-income, rural, communities of color and Oregon Tribes should be prioritized for investments, training, jobs, and advisory/oversight committees.

Dear The Joint Committee on Carbon Reduction,

Co-Chair Dembrow, Co-Chair Power, and members of the Committee: my name is Angela and I'm a resident of Oregon. I am writing to urge you to pass the strongest possible version of House Bill 2020. No other policy this session will do more to reduce climate pollution in Oregon. It's taken years of work to get here and it is past time for bold action. I've been sending in comments on this bill for years and it would be great to finally have it passed and see Oregon on the path to solving humanity's greatest threat.

The Clean Energy Jobs bill will reduce harmful pollution while also strengthening our communities and our economy. Climate change is here now and we're already suffering from wildfires to water shortages. These last few years should be a wake-up call. I ask you to pass a strong bill to reduce emissions as quickly as scientists say we must:

- Include targets to reduce GHG emissions 20% by 2025, 55% by 2035 and 100% by 2050.
- Utilities and other industries should not be given freely assigned allowances or exemptions. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.
- Offsets should not be allowed as they are just moving the baton.
- Those who are hit first and worst by climate change should be a priority. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, training, jobs, and advisory/oversight committees.

I ask you to champion bold climate action with a strong HB 2020. Please pass this bill this session and make it as protective and equitable for our communities, and our children's futures, as it can be.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Anita Dillon

Dear The Joint Committee on Carbon Reduction,

This is the action Oregonians can be proud of. Not only will it benefit Oregon, but other states will be led by example. Again, I urge you to take action while we have the opportunity.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Dear The Joint Committee on Carbon Reduction,

Oregon has long had a reputation of environmental conservation leadership. Yet, I am hearing now about how the state has been sold to the highest bidder, in terms of putting environmental safe-guards on the auction block!

The most precious and vulnerable thing we all share is the earth and the climates we live on and in. We **MUST** reverse the damage and do it **NOW!**

For people who are concerned about migrants coming to the US of America, you have seen nothing yet. As climate change alters their environments people, will be flooding here to escape the devastation.

For people who care about the air we breathe and the water we drink, the soil and the oceans, it is past time to make major changes in how we function, individually and as a society. Please, please strengthen our environmental laws; support and create clean energy jobs; hold polluters responsible for the messes they have made and keep new pollutants out of our environment!

Thank you for doing the right thing. Thank you for caring about all of us, not only the wealthy!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

BC Shelby

Dear The Joint Committee on Carbon Reduction,

My husband Ira rubin and I are very committed to this bill. We hope to see your commitment demonstrated now!!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Brady Rubin

Dear The Joint Committee on Carbon Reduction,

One of the aspects of this bill I am really excited about is how it works on multiple important fronts at once instead of pitting interests against each other. Also, of course, it will help with the fight against harmful environmental change due to our carbon emissions.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Dear The Joint Committee on Carbon Reduction,

There are those political subjects who still cling to the old dead ways of facing our problems. They still follow Trump and with him Putin and the Kremlin. Believe it, the people see those as the same. Trump after all is a questionable agent of Russia clearly corrupt and evil- and so is the GOP. They will know soon that most citizens do not agree with their corruption, crimes and destruction of our democracy to save their own nefarious moves during this whole GOP downfall.

So do you wish to fall to disgrace and oblivion with them, or do you wish to pull yourself away, take to the proper path and stand with the majority of the world who is trying to do something real to save our planet and our own lives! Many of the politico's are now beyond any salvation.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to make the Clean Energy Jobs Bill require Intel, one of the biggest polluters of air and water in Oregon, to take the necessary and expensive steps to reduce this pollution just as much as any other profitable polluter must do. The families and workers in Hillsboro and neighboring communities will be healthier and more productive as a consequence!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

Dear Committee members,

Listen, basically we're headed towards 2° of warming. This is what, a few years ago, most would've called the worst case scenario, now it's the most likely case scenario. We have to face reality, carbon pollution is destroying our hope for a future of peace and prosperity unless we take radical, all-encompassing action right now! This is no joke. You may be mulling over how strongly you should make this jobs bill. You don't want to hurt businesses or the economy. But let me urge you, for the sake of my children and yours, to be braver than you have ever been before. Do not look away from the ugly future we will all have if we don't take big bold steps today. Please be strong and make HB 2020 the strongest it can be.

Thank you,

Charissa in Portland

Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 5:11:56 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Cherri Mason

Dear The Joint Committee on Carbon Reduction,

This is so very important! Time is running out for action before even worst results of climate change begin to appear, in Oregon and everywhere. Witness the wildfires in Southern Oregon the last two years. I'm tired of living in thick smoke every summer! Please do the right thing for us all and support HB 2020.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

I owned a successful Oregon Coast business for 22 years. I was able to turn every added environmental regulations into a positive for my business. I also have a oil and gas business in Texas, Oklahoma and Colorado which I am transition down and am bringing those assets to Oregon due to proposals such as HB2020. Even if new regulations add price to doing business, we have no choice and must take the price of a having any future first.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 5:14:07 PM

Dear The Joint Committee on Carbon Reduction,

Green jobs create a ethical + successful economy

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Connea Derber

Dear The Joint Committee on Carbon Reduction,

As a mother of a young child, I, more than anything, want him to have a viable future. And this requires a sustainable environment. We owe it to our children to make this world a better place. We must push back. We must move towards a greener future.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Date: Thursday, March 7, 2019 9:11:15 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Daniel Myers

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Debbie Schlenoff

Dear The Joint Committee on Carbon Reduction,

We find that the effects of climate change are happening faster than scientists predicted. Please keep Oregon in the forefront of action for us and the planet we depend on. Thank you.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

Subject: Deborah Clark supports HB2020
Date: Friday, March 8, 2019 3:38:35 AM

Dear Co-Chair Dembrow, Co-Chair Power, and members of the Committee,

My name is Deborah Clark and I live in Shedd, OR 97377. It is very important to me that you pass the strongest possible version of House Bill 2020. We now have no choice in limiting our emissions of carbon dioxide. No matter how difficult it might be to significantly reduce carbon dioxide emissions now, the alternative of doing little or nothing will be much worse. This bill is a good first step.

The cap-and-invest system set up by HR 2020 Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities. As reported by Oregon Public Broadcasting, a new economic report by Berkeley Economic Advising and Research that was presented to the state legislature, “finds Oregon’s proposed cap-and-trade-bill would create thousands of jobs and boost household income while creating only modest increases in energy prices. Moreover the more aggressive interim cap on greenhouse gas emissions proposed for 2035 would create even more economic benefits than a more gradual decline in emissions from 2021 and 2050.”

My understanding is that California is cutting emissions while its economy grows. In California's two years of experience, 3.2 billion dollars were added to their economy for clean energy solutions and jobs because of the money raised from pricing carbon. In 2017, California’s legislature took a bipartisan vote to extend its program for another 10 years. Oregon deserves this economic boost and the opportunity to lead as we have in the past with our beach bill, land use planning, and limits on new fossil fuel infrastructure.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. There must be a clear requirement that the majority of all proceeds will go to the communities most impacted by climate change to not only mitigate impacts, but more importantly provide opportunities. This should include low-income and rural communities, communities of color, at least a 10% Tribal set aside, and a just transition fund for workers.

It is critical that the division of funds to promote justice be maintained in the bill. Please do not allow HB 2020 to move on with the language “to the maximum extent feasible.” Set specific targets and percentages, allow for review after 5 years, and then adjust accordingly.

I am 68 years old. I do not want my legacy to my three grandchildren to be a world in which they suffer because of my generation’s failure to act. Climate change is here now. We can no longer post-pone reducing our carbon dioxide emissions.

I ask you to champion bold climate action with a strong HB 2020. Please pass this bill this session and make it as protective and equitable for our communities as it can be.

Thank you.

Sincerely,

Deborah Clark

"Ours is not the task of fixing the entire world at once, but of stretching out to mend the part of the world that is within our reach... It is not given to us to know which acts or by whom, will cause the critical mass to tip toward an enduring good. What is needed for dramatic change is an accumulations of acts ... We know that it does not take everyone on Earth to bring justice and peace, but only a small, determined group who will not give up during the first, second, or hundredth gale." No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

DIANA KEKULE

Dear The Joint Committee on Carbon Reduction,

Short of reducing carbon emissions quickly but painfully for most Oregon citizens, Oregon can enact HB 2020 2019 this session to create strong incentives for carbon reduction and to stabilize our economy as policies meant to address climate disruption come on line.

As a public health and prevention physician, we know from governmental and other studies, climate disruption also is starting to and will affect the health and wellbeing of all Oregonians. Oregon's public health system is incapable of specifically beginning to monitor and address these impacts.

Therefore, in addition to supporting this bill, I urge you to fully fund the Governor's Public Health Modernization request in SB 5525 to increase funding to state, local and tribal public health. Oregon can no longer respond to urgent public health issues while being at the bottom of rankings for per capita funding for public health by the Oregon Legislature (likely below the Robert Wood Johnson Health Foundation's 2011 ranking of 47th in the US among states. Shameful.

Thank you for your service for us in your district and for your serious consideration and votes for HB 2020 and SB 5525.

Kind regards,
Dr James A Gaudino MD, MS, MPH FACPM

Dear The Joint Committee on Carbon Reduction,

I'm 18 years old, and I want my future children to experience the full range of gifts our beautiful state has to offer. I want them to spend their summers playing outside and breathing Oregon's sweet air without choking on smoke. Infrastructure takes a long time to change, and the climate can't wait. We need to start shifting our economy toward something more sustainable, and a stronger Clean Energy Jobs bill is a great first step.

Subject: We need a strong HB 2020!
Date: Friday, March 8, 2019 7:19:33 AM

Dear The Joint Committee on Carbon Reduction,

The most important jobs for HB2020 are to truly cap emissions and do so to the UN IPCC SR15 guidelines as will be updated over time. Offset limits are part of what must be accounted for in determining allowances.

Moneys raised from allowances and offsets will allow the important work of facilitating many constituencies to make a just transition to the green economy. It is important that those fees be collected and used wisely.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Edward Averill

Dear The Joint Committee on Carbon Reduction,

We are running out of time to make a difference. This "environmental" perceived state should be a front runner in the fight for our environment. Please pass a strong bill NOW - no more passing it off to future generations. We need to hold ourselves responsible for the mess we have made!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

Dear Legislators:

I am definitely in support of this ground breaking legislation to improve our energy efficiency, reduce our reliance on polluting fuels and making our communities more resilient to climate change. This is a first big step for our State and I endorse the proposal. It will be important for it's success that modifications to improve the implementation be conducted during the early term of the new law so that all Oregonians can benefit and see first hand the progress towards the goals.

Let's make Oregon accomplish another first!

Sincerely,

Eli Ashley

Dear The Joint Committee on Carbon Reduction,

We are taxed for making the choice to smoke cigarettes or tan in order to discourage unhealthy choices, yet corporations aren't yet taxed for making choices that are ruin the health of the human race. The financial expense of releasing greenhouse gas should reflect its true expense in terms of current and future human suffering. We need to stop selling out our children's future.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

Clean energy is going to help save our winters and our summers by helping to slow climate change. We are currently 'losing' our winters at an alarming rate on the west coast. Areas that used to frequently observe 10s of feet of snow are now only experiencing a few feet. While our summers are suffering the wildfires fueled by droughts and further polluting the air we have to breathe. It's past time to take steps in the right direction.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution 'hotspots' in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Elizabeth King

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Dear The Joint Committee on Carbon Reduction,

The time has come to take bold decisive steps to DEAL with climate change in a proactive positive way... or it will destroy most of us the survivors can struggle and fight over what's left! We owe this to future generations not just to humans but to ALL CREATURES of the EARTH!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution 'hotspots' in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Erin Marshall

Date: Friday, March 8, 2019 4:07:53 PM

Dear The Joint Committee on Carbon Reduction,

A strong HB 2020 is crucial in order to prevent disastrous and irreversible climate chaos. Please support such a bill. Thank you, Ernest and Jane Rimerman

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Dear The Joint Committee on Carbon Reduction,

Even this attempt might be too little to late. The IPCC report says we only have until 2030 to get our GHG emissions down. Some scientists believe that we may be reaching a tipping point due to loss of ice in the Arctic, and it may be even sooner.

This bill is the least we can do, and it is better than doing nothing. We must move firmly off of fossil fuels.

Thanks

Dear The Joint Committee on Carbon Reduction,

In the 1960s John Kennedy challenged America to put a man on the moon in 10 years. Now we face a more compelling challenge to eliminate fossil fuels in 10 years. Can we do it? I think so by diverting the trillions spent on forever wars towards this issue.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

As a person of faith, I attended Ecumenical Ministries of Oregon Interfaith Advocacy March 4. I attended a session on Climate Justice presented by Renew Oregon. I think that the Clean Energy Jobs Bill is the most important piece of legislation this session. I ask you to strengthen it by putting back in the set-asides for impacted communities that were part of the 2018 bill. I also ask that you put back in the citizen advisory committee. For the sake of my grandchildren and all the children of Oregon, I ask for the strongest possible bill.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

we need to start now-we need to pass clean energy jobs bill-our weather has shown you the the furry of mother nature has become stronger and violent -just remember the fires,tornados,hurricanes,just all mother nature yelling out at us

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Gertrude Turley

Dear The Joint Committee on Carbon Reduction,

People around the world who are suffering from climate-related natural disasters at an unprecedented scale. I am terribly afraid for the future of humanity. I am the mother of two children, and the future feels bleak. This is the most urgent issue of our time. I beg you to act now.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

Dear The Joint Committee on Carbon Reduction,

We should charge users for pollution or other waste on everything so that people have to take the impact into account when using things AND the funds can be used to clean up the waste. Like the bottle bill that helps reduce litter and waste.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

The fossil fuel lobby and their allies are trying to weaken and stop this important bill. The Joint Committee on Carbon Reduction is in charge of the final version of this bill. House Bill 2020 will invest much needed dollars in rural communities such as ours here in Oregon. Keep the bill strong with no breaks for climate polluters. Do not roll back existing climate legislation. Oregon needs to be a leader in combating climate change and we need to protect this beautiful state and Mother Earth!!!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 5:04:17 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Hannah Satein

Dear The Joint Committee on Carbon Reduction,

We have your backs. There are 10,000 of us in our churches in Portland that are standing up AGAINST THE CLIMATE CRISIS and for hb 2020 +. This bill is only a beginning and imperative to give our children and grandchildren and all the creatures we share this planet with a chance for a future. The work you do to STAND UP TALL to the power of the fossil fuel lobby and be a beacon of hope to dozens of other states and hundreds of other cities in North American that will follow us. Be our hero's! We have your backs.....

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

It is imperative that the Clean Energy Jobs bill, HB 2020 be passed to strengthen our economy and create living-wage jobs. We must reduce the harmful pollution caused by Big Oil. They need to be accountable for their actions. The threat of the climate crisis is serious and must be taken care of immediately. The passing of the Clean Energy Jobs bill is the answer to our climate change problems at this time.

Thank you for your consideration in this matter.

Mrs. Helen Osgood

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

My family is feeling the effects of a changing climate, from nearby wildfires and smoke that limits my activities due to asthma, to recent unexpected winter storms that left us without power for 8 days and completely shut down Hwy 58, among a number of Oregon highways. Thank goodness for the efforts of combined crews who restored our power.

We need to DO something about carbon emmissions. The time is now.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution 'hotspots' in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Hillary bryan

Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 4:39:48 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Dear The Joint Committee on Carbon Reduction,

Please commit to making this as strong as possible no one in 2050 when we finally get off fossil fuels and manage to avert the worst case scenario of climate change and even began to reduce atmospheric carbon is going to care about the rough patch some people may be put through. If we do nothing the results will be catastrophic. If we do a little the results will still be catastrophic. If we do everything exactly right the results will still be catastrophic as the atmosphere will be hotter than it is today so by not committing as fully as possible you're sending a message to the rest of the world that a few jobs and some money is worth the untold human suffering that will result. Please stand strong and show the rest of the world and the country that this is a serious problem that requires serious attention.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

I care strongly because everything is connected. Climate change will destroy cities, governments, and the lives of millions. We can start investing now to reduce the impact or pay a greater price later - in our lifetimes.

Jack

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Jackson Chapman

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Janet Zancanella

Dear The Joint Committee on Carbon Reduction,

The issue matters because we simply have to give back to our planet that has and is providing for us in countless ways.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Jay Panagos

Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 9:42:24 PM

Dear The Joint Committee on Carbon Reduction,

not to mention it also makes an impact on what matters most as well

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Jeremy Gooding

Dear The Joint Committee on Carbon Reduction,

Please keep fracking and big oil out of Oregon. We need affordable clean energy choices. I stress, affordable, clean energy choices should not be priced out of reach of the average person. Companies should not be getting rich on the backs of Oregon consumers. All companies need to pay their fair share of taxes. Giving them tax breaks as a way to encourage their presence in Oregon is not acceptable. Having a clean and healthy environment is important, but not if it lays a financial burden on the citizens of Oregon.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

Here on the Central Coast, we will be impacted by rising sea levels that will cut off areas of HWY 101 and 34. Most of downtown Waldport is only about three feet above sea level. We must do what we can to mitigate the harm that has already been done. and there is no time to lose.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

State vehicles should be transitioned to electric. Vehicles needed for longer range driving should be hybrids. State buildings should be powered by 100% renewable energy. Lighting in state buildings should be by LEDs. Food vendors in state buildings should be locally grown and sourced food. All suppliers should adhere to green product and energy guidelines.

Make state government the leader in protecting our climate.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Joel Rosenblit

Subject: We need a strong HB 2020!
Date: Friday, March 8, 2019 8:37:18 AM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Judy Kinsman

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Dear The Joint Committee on Carbon Reduction,

Dear Oregon Legislators,

We need you to act on Climate Change/Global Warming. I have lived in Oregon nearly my entire 53 years, and I can see how the weather has changed since my childhood. The effects of global warming cannot be ignored. It is time for Oregon to step up and be a leader. I am tired of us being third on the West Coast in the Progressive ideals that will get us out of this dire situation.

With sincere hope,
Karyn

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Subject: We need a strong HB 2020!
Date: Friday, March 8, 2019 7:12:33 AM

Dear The Joint Committee on Carbon Reduction,

It is my personal health issue right now, and for millions more. Action must happen now to alleviate our struggle for clean air and water.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Kathleen Giorgi

Date: Friday, March 8, 2019 11:58:10 AM

Dear The Joint Committee on Carbon Reduction,

The states that have implemented a cap-and-trade-and-invest system have strong economies! Those states have taken the risk and have proven that cap and trade is not a deterrent to the economy but quite the opposite. What is a deterrent to the economy is to do nothing! Please vote for HB 2020!!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

It is time for us to recognize that clean energy jobs (manufacturing and installing wind turbines and solar panels, building the infrastructure to support clean energy, retrofitting existing housing to be more energy efficient, etc) are a better long term economic policy than supporting the last desperate efforts to extract the remaining fossil fuels to the benefit of international corporations and to the detriment of the people and long term economic benefits of Oregon.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 4:42:02 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Kevin Brown

Dear The Joint Committee on Carbon Reduction,

Utilities that import electric power from other states will be subject to audit and review of their RPS commitments from the state they export from...Hence Pacific Power..Avista..strike down projects that are not viable to our states well being...corporate carbon misuse..

Hence..Pembina..Jordan Cove...and Gas collector pipeline ..there is no viability to these project..Canadian company..transferring and selling USA fracked gas..Eco disaster..and clearing millions of acres of forestry.. Nonsense..LNG plant explosive nightmare

Subject: We need a strong HB 2020!
Date: Friday, March 8, 2019 12:41:14 AM

Dear The Joint Committee on Carbon Reduction,

Our planet cannot take the abuse, it has been subjected to. We need to clean our act, how better?

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Larry Lemke

Dear The Joint Committee on Carbon Reduction,

The risks of aiming too high are not something we should worry about, the risks of aiming too low, definitely are. I'm a fairly young adult and even in the relatively short amount of time I've been alive, I've seen the effects climate change has had on us. That makes me afraid for our future - not a century from now, not 50 years from now - I'm afraid of what could happen within the next 10 years.

The cavalier attitude so many politicians have had about our environment has brought a feeling of hopelessness. But what has given me hope is what Oregon has and can possibly do. I have been proud to be an Oregonian, I've seen so many initiatives in Oregon to help our environment and I hope we can continue to show just how much we can do and to show other states what we should be doing.

I hope that Oregon can set a strong example for others and to really make a difference for our future. Thank you.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

LASTLY - those lying a\$\$***** USAF Meteorologists need to be jailed, for mass genocide through their chemical spraying wars...

Which gave my mother ~ brain cancer.

Hold them ALL accountable already for creating false scientific studies to satisfy their SICK agenda on depopulation via their 2025 White Paper, amongst many other fake studies - such as ones sent from those stationed in Australia....and shared with the UK, due to their UFO research. ** Start with Keesler...

Signed,
3xAF BRAT

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

Dear legislators, my baby son is about to turn one, and I am terrified of the future for him and the other children of Oregon. The last few years have made it very clear that climate change is already here - fires, heat, drought - and only going to get worse. I want my child and myself to have clean water, smoke-free air, and a healthy Oregon to live in, in 10, 20, or 50 years. We need to start now to make changes as rapidly as possible -- that means a strong version of this bill with a tight cap on emissions and no exceptions. Oregon does need jobs, and I hope we can create them in the renewable energy industry. Oregon doesn't need a rapidly warming planet or a LNG terminal. For all our futures, please make this bill as strong as you can! Thank you,
Lily

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Lily Cool

Dear The Joint Committee on Carbon Reduction,

We **MUST** take action **NOW** to start progress in the right direction to save our planet!!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Dear The Joint Committee on Carbon Reduction,

We have a beautiful state. Let's keep it that way. We need clean water and air! We should be out in front leading the way to save our planet, not kowtowing to big polluters. These emission reduction goals are too modest as it is. Please pass them or get out of the way.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Dear The Joint Committee on Carbon Reduction,

Hemp can do anything big oil can do better.

The missing piece of the puzzle industrial hemp processing. The only industrial hemp processing site is in North Carolina. Want to show the world clean energy?

Show them what hemp and solar power can do.

Between those 2 things we could take our state into the green (pun intended) and be trendsetters for cost effective renewable energy.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Lorraine Foster

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Dear The Joint Committee on Carbon Reduction,

Oregon has been a leader on many issues and we need to lead in creating clean energy jobs, too. We have to protect our state, country, planet from the effects of climate change now. Clean energy jobs are a win win, growing our economy while preserving our rivers, lakes, streams, land, and air. Keep Oregon Green!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

I am writing in strong support House Bill 2020. We can't wait any longer to stop the pollution that is causing climate change. It is probably the most important issue of our time. We need the strongest bill possible. This meant withstanding the pressure and dollars from corporations who are seeking to weaken the bill to their benefit. I'm asking you to think of your kids and grandkids and craft a bill that speaks your conscience. Thank you.

Dear The Joint Committee on Carbon Reduction,

My family and I--including 6 voting, tax-paying adults--hope that this is only the beginning of Oregon's progress, and that this bill is refined and improved before passage. The above message covers most talking points, but we are seriously concerned about potential damage from exemptions: Please, no Jordan Cove project (at all); no alteration for trains carrying flammables; no burned garbage to be considered a cleaner/improved fuel source; etc.--you get the idea.

Just do your best to make the strongest bill possible, and we, your constituents, will be proud of you and our state.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Mariah Hinds

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Dear The Joint Committee on Carbon Reduction,

I am a gardener. I have seen how our climate has been changing and experienced how our final frost date has been coming earlier. I saw how drought-stricken my plants were this past year. I was affected by all the smoke from the wild fires worsening our air quality. We must do everything we can to mitigate climate change before it is too late.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Mary Davis

Dear The Joint Committee on Carbon Reduction,

since the current white house administration is completely corrupt, the states must lead our nation out of the oil slick darkness and into a sustainable future. The buck stops with you and you can't pass it on. There is a very real attack on Oregon from international corporate timber and plastic and fossil fuel interests. Your responsibility is to save Oregon from these onslaughts to destroy our natural resources. Further onslaughts come from the climate change created by these unrestrained exploiters. Oregon has dead zones in our ocean, pollution in our rivers and drinking water sources, plastic on our beaches, dying trees from drought and insects. WE can create a sustainable future IF Government supports clean energy, clean jobs. Do it.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

Dear The Joint Committee on Carbon Reduction,

When the federal administration has gone nuts, ignoring science and pushing through rules to allow pollution of our natural habitat, the states must stand up to save the planet. Oregon should be a leader in this effort as we still have rivers and forests and a few fish left. Climate change has already impacted our ocean with dead zones, exacerbated drought and floods, extreme weather events, we have little time left to act, so act we must. I urge you to promote hemp farming now that Ron Wyden has made it legal, promote the manufacturing of hemp products such as toilet paper, building materials and clothing, and in the process end support for mega corporations turning forests into Doug fir plantations and toxic pesticide dumps, a foreign corporations turning rural river communities into "acceptable losses" with fossil fuel and plastic promoting industries. We have vast empty lands in beautiful southeastern Oregon that have wind resources that have not yet been harnessed. We have ocean energy resources that OSU has worked on to provide energy through wave action. WE must go toward the future with intelligence and wisdom....not clinging like whiny babies to the deadly mistakes of the past.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

I'm not a grandparent yet but I look forward to being one. However, we if do not clean up pollution, then maybe it would be best if my son never had children. I would hate for them to be brought into a world where they might be poisoned by the air they breathe. We need to do what we can to help alleviate climate change for ourselves, our children and their children!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Mauria McClay

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Subject: We need a strong HB 2020!
Date: Friday, March 8, 2019 6:59:20 AM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Michael Roteik

Date: Friday, March 8, 2019 3:04:41 PM

Dear The Joint Committee on Carbon Reduction,

Carbon reduction is important to me because I have a 3-year-old son. As things stand, if we do not cut our carbon emissions, he will have to live in a world where global temperatures rise by 2 degrees celsius or more. The results for him and for all of us will be catastrophic. Food shortages, climate refugees, poor and uncertain air and water quality, heat-related illnesses, increases in insect-borne illnesses, wildfires, acidic oceans, deforestation, and extinction are among the many negative consequences. Right now is our last chance to correct course before it is too late for us and our children. Please support this necessary and life-saving climate action. Thank you.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

My personal message: It is critically important the this bill passes in as strong a form as possible. Please do not allow exemptions for the polluting industries such as fuels, paper, incinerators, ESPECIALLY the Jordan Cove LNG project (this project should be denied on its merits). Pay no attention to those who say "Why Oregon? It will kill jobs and make no difference since we are a small part of the world" We need to show leadership to the rest of the US and the world by passing this bill. Climate leadership must start somewhere. Let it be here.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 5:22:44 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Nancy Carl

Dear The Joint Committee on Carbon Reduction,

There is no time to delay a second longer, for my children and for yours. Decades spent in denial have gotten us here. Oregon that calls itself the green state, sometimes in obvious contradiction to its actions, should be a leader here and going forward.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

I don't agree with the cap and trade system especially since we are slaughtering the forests that are our best carbon extractors. I see that it is just a pat on the back to look as if we are attempting to reduce our pollution levels. There are laws already in place that if they were upheld and enforced by DEQ, EPA, the AG dept and ODF, these companies would be stopped and fined out of existence. But no, you all don't want your bonuses cut do you? Failure to stop the great polluters from destroying our planet and allowing them to leave behind toxic super fund clean up sites has been the real reason for the problems we all are facing today. It's time to take bold right actions and stop playing games with all life on this planet. Because no amount of money will buy back safe clean drinking water once it's been poisoned. Stop the abuse of power now. Do what is right, now.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 10:20:14 PM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Dear The Joint Committee on Carbon Reduction,

We know many of you agree with the above sentiments, and that you will pass a strong bill for Oregon. Climate change is currently the biggest environmental problem that we face, and we owe it to our children and grandchildren to pass on a livable world to them! Thank you for all that you do to make this happen in Oregon! Our leadership (and that of other enlightened states, is critical, especially in the absence of any meaningful direction or policy at the federal level.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Peter and Josephine von Hippel

Subject: We need a strong HB 2020!
Date: Thursday, March 7, 2019 9:54:53 PM

Dear The Joint Committee on Carbon Reduction,

Save our planet and animals

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Subject: We need a strong HB 2020!
Date: Friday, March 8, 2019 8:02:07 AM

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Raziah Roushan

Subject: We need a strong HB 2020!
Date: Friday, March 8, 2019 6:01:38 AM

Dear The Joint Committee on Carbon Reduction,

Ours is a beautiful world, especially here in Oregon. Let's remember how precious our natural resources are and work together to help them remain available into the future.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Robin Bentz

Dear The Joint Committee on Carbon Reduction,

The scientific evidence is undeniable. It is urgent to change our habits, our infrastructure, and our energy consumption. We have the means to make a change, but we need to act collectively and quickly. Invest in cleaner, greener energy now ! Pass and enforce the Green New Deal. Thank you for taking strong action. We all will thank you later for it. =)

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Sandra Oliver-Poore

Dear The Joint Committee on Carbon Reduction,

This issue matters to me personally for a number of reasons, including my own health. Ever since a workplace exposure, where I inhaled some toxin that remains unidentified, I have struggled with asthma and polluted air has become much more of an issue for me--something that used to be hardly on my radar. On days when the air quality is worse, I have to severely limit my outdoor activity (and outdoor activity is one of my greatest joys in life!). My co-worker wound up in intensive care as a result?I've lost track of him but I imagine he is still struggling, too.

I also have deep concerns about the damage being done to our climate by human activity, such as pollutants released into our air. As a birdwatcher for many decades, I have no doubt the climate is changing in ways that are impacting wildlife?I've observed with my own eyes the ranges of some species changing. I have DEEP concerns about the impact of the proposed Jordan Cove LNG terminal upon Oregon?s wildlife and climate and want to be certain this project receives NO type of exemption from coverage by this bill!! Please make this legislation as strong as possible!! Thank you for your consideration!

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Dear The Joint Committee on Carbon Reduction,

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. Dear The Joint Committee on Carbon Reduction,

I live a couple of blocks from I-5 and I-84 in a neighborhood with some of the worst air quality in the nation. I have lived here for 25 years and I raised my kids here. The freeway expansion under the guise of "carbon reduction and safety" is a travesty and a boondoggle. Clean air, clean energy and clean jobs is a local issue as well as a world issue. Don't allow the greenwashing of bad policy. Use science and accounting to come up with real ways to move us forward as a state. We can do this! Save the future!

Signed, a one car, bicycle loving, tree planting, veg growing cooperative living oregon family- looking for leadership from the democrats!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

I support efforts to reduce carbon emissions. In addition to cleaner energy solutions, I support getting rid of plastic bags and other plastic containers, not just for food, but also for non-perishables.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

I CRY EVERY TIME I read about or see photos of the disastrous damage being inflicted on our precious Earth by climate change. It's extreme and we can no longer ignore the effects our continued use of fossil fuels is causing. PLEASE champion HB 2020, if not for your sake and that of our current generation, then for your children's children and the generations to come. If we don't act now, we face the very real probability of extinction of the human species, along with most every other species still in existence today. This is not a fabrication or even a possibility. This is a very real probability that we cannot avoid unless we take serious action now! Please help! Thank you.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

Dear The Joint Committee on Carbon Reduction,

My 14 year old daughter has been lobbying for this bill for two years. She is fighting for her and her autistic brother's future. I watched as you listened to the youth, including my daughter, testify on February 18th. Are you going to let their future be ruined because the adults in the room have money behind their voices? These kids will be voting in a few years and you need them on your side. They will be future of Oregon.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

Dear The Joint Committee on Carbon Reduction,

Please do your part to let Oregon do its part. We all really know there is nothing more important than acting now.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution hotspots in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Sherry Hall

Dear The Joint Committee on Carbon Reduction,

We need to reduce Carbon pollution as soon as possible. We need to invest in green energy immediately, improve and harden the electrical grid and forego further investment in fossil fuel infrastructure.

No time left to stall or equivocate.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Stephen Brand

Dear The Joint Committee on Carbon Reduction,

I am very proud of the leadership that Oregon is demonstrating in crafting Portland's Clean Energy Jobs Act and HB 2020. They are setting new higher standards for dealing with Global Warming and environmental justice. Two issues crucial to our survival and the challenges confronting our state now and in the near future.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Dear The Joint Committee on Carbon Reduction,

Asking for your Clean Energy Leadership, Susan Morris

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Susan Morris

Dear The Joint Committee on Carbon Reduction,

It is past time that these issues be addressed. I highly value the natural environment I am fortunate to live near, and wish it to remain healthy as well as myself. Pollution is not welcome here!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

Dear The Joint Committee on Carbon Reduction,

The Clean Energy Jobs Act is a visionary piece of legislation that would put Oregon in the forefront of the national and global movement away from fossil fuels toward a sustainable clean energy economy! I am therefore encouraging you, yet again, to stand with our children and grandchildren, and take the vital step needed to initiate the inevitable transition we all must make to a renewable energy infrastructure, in a manner that simultaneously holds polluters accountable and provides funding for innovative energy solutions and new jobs for Oregonians!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Thomas Wicks

Dear The Joint Committee on Carbon Reduction,

Although I know there is concern in Central Oregon about costs going up for the agriculture sector of our economy. However, by not acting on Climate Change I believe those costs will go up far more and will take a much greater toll over the years. Not acting is simply not acceptable.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.

Utilities should not be given freely assigned allowances, and there should be no more than 25% free allowances for emissions-intensive, trade-exposed industries (EITEs). Any accommodation for EITEs should support in-state production, be needs-based only, be regularly re-evaluated, and be phased out altogether by 2030.

Offsets should be limited to Oregon-only projects, with a limit of 2%. The program must ensure that offset benefits accrue to Oregon communities, do not contribute to pollution "hotspots" in other states, and are only given for emissions reductions that would not have happened in the absence of the offset program.

Hold all major polluters accountable with a price on greenhouse gases. Don't allow for exemptions for any polluting industries, including aviation, marine, and railroad fuels, as well as fluorinated gases and solid waste incinerators. Any attempt to exempt the proposed Jordan Cove LNG terminal from coverage in the legislation must absolutely be denied.

Those who are hit first and worst by climate change should be a priority for investment, to provide job opportunities and benefit communities. This means prioritizing low-income, rural, communities of color and Oregon Tribes for investments, jobs, and training.

Finally, we need decision-making structures that are transparent, equitable, flexible, and accountable. All advisory and oversight committees should have an over-representation of historically underrepresented communities; the Environmental Justice Task Force, equity groups, and Sovereign Nation representatives must play significant and meaningful roles.

I ask you to champion bold climate action with a strong HB 2020.

Sincerely,

Wendy Holzman

Dear The Joint Committee on Carbon Reduction,

The time is now. Let's think about our children and future generations. Let's do the right thing!

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

Dear The Joint Committee on Carbon Reduction,

Since the Republicans in control on the federal level choose to stick their heads in the sand in the issue of climate change. We must do all we can on the municipal and state level to take actions needed to combat it.

I'm writing to urge you to pass the strongest possible version of the Clean Energy Jobs bill (House Bill 2020) in 2019. No other policy this session will do more to reduce climate pollution in Oregon and tackle humanity's greatest problem. It's taken years of work to get here and it is past time for bold action.

The cap-and-invest system set up by Clean Energy Jobs not only guarantees harmful pollution will be reduced, but it will also build up our economy and communities at the same time.

From wildfires to water shortages, we've already begun to live with the effects of climate change in Oregon. These last few years have been a wake-up call. Our state must lead the way in meeting this challenge for the rest of the nation.

I ask you to work on my behalf for a strong bill with a meaningful cap to reduce emissions as quickly as scientists say we must. The legislation should include targets to reduce GHG emissions by 20% by 2025, at least 55% by 2035 and 100% by 2050.
