Teacup Nordic, a cross country ski area on Mt. Hood, would like to add its voice to the other ski resorts on the Mountain in support of Clean Energy Jobs.

Thank you,
Paul Blackburn, President, Teacup Nordic
president@teacupnordic.org

Timberline, Mt. Hood Ski Bowl, Summit, Cooper Spur and Mt. Hood Meadows ski areas (and now Teacup Nordic) support S. 3791/H.R. 763, the Federal Energy Innovation and Carbon Dividend Act and Oregon House Bill 2020, the Oregon Climate Action Program.

The winter sports recreation industry is uniquely vulnerable to feel the environmental and economic impacts of climate change. Warmer, less predictable winter weather, reduced snow packs, and tinderdry forests in summer are all well-documented effects of climate change which can lead to uncontrolled wildfires. The leading contributor to climate change is carbon emissions, which generate harmful greenhouse gasses.

The ski areas of Mt. Hood have been leaders in the snow sports industry, and in our community, for early adoption of sustainable business practices and advocacy for public policies that effectively address reduction of carbon emissions.

Two important climate game-changing public policies are now before us. We urge the 116th Congress and the 80th Oregon Legislative Assembly to enact these two packages of climate legislation:

We support S. 3791/H.R. 763, the Federal Energy Innovation and Carbon Dividend Act. This Act stands out with its market-based approach to meeting aggressive emissions reductions targets, while providing Oregonians with a dividend. This legislation is bipartisan, embodying an American ideal of working together to find common solutions that are effective and long-lasting.

We support the basic framework of Oregon House Bill 2020 which creates an Oregon Carbon Policy Office to administer the [Oregon Climate Action Program](#), which would adopt an economy-wide cap and invest system to regulate greenhouse gas emissions in Oregon. We understand that aspects of this bill will change during the legislative process, but let us adopt meaningful climate legislation this session.

We also support efforts by the Federal Government to manage our National Forest system in a manner which reduces forest fuel loading and encourages the

economically productive use of fiber resources which, in turn, create rural jobs and reduce the incidence of catastrophic wildfires in Oregon.

Damage caused by carbon-based greenhouse gases are at or near the tipping point. This issue cannot wait any longer for decisive action. Citizens, industry and Federal and State government must put partisanship and personal opinions aside and address this problem now.

Therefore, we would encourage our elected representatives at both the state and federal levels to support the respective climate solutions legislation.
